                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and heparin. Pharmaceuticals comprising PDGF-C polypeptides can also be used for stimulating connective tissue or wound healing. The PDGF-C polypeptide can be enzymatically processed to generate the active truncated form of PDGF-C and used to regulate the receptor-binding specificity of PDGF-C. PDGF-C can also be used to promote fibroblast mitogenesis in a mammal and to induce PDGF alpha receptor activation. PDGF-C antagonists can be used to inhibit tumour growth of a tumour expressing PDGF-C in a mammal: Specific types of human tumours, e.g. choriocarcinoma, Wilms tumour, megakaryoblastic leukaemia, lung carcinoma and erythroleukemia, can be identified by testing for expression of PDGF-C. PDGF-C antagonists can also be used to inhibit tissue remodelling during invasion of tumour cells into a normal population of cells. Antagonists can also be used to treat fibrotic conditions,
                                                                                                                                                                                                                                                   Mouse; Zvegf3 antagonist; cell proliferation; stellate cell activation; extracellular matrix production; fibrosis; VEGF-R; PDGF-C; platelet-derived growth factor; PDGF; vascular endothelial growth factor; VEGF; mitogenic effect; therapy; keloid; scleroderma; fibrotic disorder; chronic active hepatitis; fulminant viral hepatitis; amyloidosis; diabetic nephropathy; alpha-1-antitrypsin deficiency; silicosis; assestosis; renal arteriosclerosis; post necrotic cirrhosis;
                                                                                                                                                  diabetic glomerulosclerosis; focal glomerulosclerosis; hyperostosis; pulmonary hypertension; idiopathic pulmonary fibrosis; osteopetrosis; bronchiolitis obliterans-organising pneumonia; transplant vasculopathy;

                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The patent discloses materials and methods for reducing cell CC proliferation or extracellular matrix production, treating fibrosis and CC reducing stellate cell activation in a mammal. The method comprises CC administering a composition containing a Zwegf3 antagonist in combination with a delivery vehicle. The Zwegf3 is a protein that is structurally CC related to platelet-derived growth factor (PDGF) and the vascular CC endothelial growth factors (VEGF). The Zwegf3 protein is also designated as "VEGF-R" and "PDGF-C". The Zwegf3 antagonist is useful to block the CC mitogenic effects of zwegf3 and thereby to inhibit or prevent and treat keloids, scleroderma, fibrotic disorders of liver such as chronic active hepatitis, fulminant viral hepatitis, post necrotic cirrhosis and CC diabetic glomerulosclerosis, focal glomerulosclerosis, diabetic comphropathy, amyloidosis and renal arteriosclerosis, diabetic for the lung such as silicosis, asbestosis, idiopathic pulmonary fibrosis, of the lung such as silicosis, asbestosis, idiopathic pulmonary fibrosis, bronchiolitis obliterans-organising pneumonia and pulmonary hypertension, CC disorders of the bone such as osteopetrosis and hyperostosis. The present sequence is mouse Zwegf3 protein.

                                                                                             The sequences given in AAB47889-90 represent human and mouse zvegf3, respectively. zvegf3 is a platelet derived growth factor (PDGF) homolog and it was used in the method of the invention for promoting growth of bone, ligament or cartilage and stimulating proliferation of osteoblasts or chondrocytes in a mammal. The proteins used were preferably a dimeric protein of residues 235-345 of human zvegf3 or all of the mouse zvegf3 protein, with a delivery vehicle. The method of thinvention is useful for promoting growth of bone, ligament or cartilage in a mammal, where the composition is administered at a site of a bony defect, preferably a fracture, bone graft site, implant site, or periodontal pocket, and mammal. It is further useful for promoting proliferation of osteoblasts, osteoclasts, chondrocytes or bone marrow stem cells are harvested from a patient prior to culture. The
                                                                                                                                                                                                                                                                                                                                           Promoting growth of bone, ligament or cartilage in a mammal, administering to the mammal a protein which comprises growth domain of zvegf3 protein, a homolog of platelet-derived growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        implant; periodontal

                                                                                                                                                             The patent discloses a method for producing a transgenic, non-human animal over-expressing a platelet derived growth factor C (PDCF-C), or its functional fragment or analogue. The method involves introducing a transgenic PDGF-C DNA into a cell of a non-human animal, introducing the cell into a non-human animal and allowing the cell to develop into a transgenic, non-human animal. The transgenic animal is useful as a model to study disease states characterised by over-expression of PDGF-C and to find therapy for those diseases, particularly hypertrophy and fibrosis in various organs including the heart. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                             A transgenic animal over-expressing platelet derived growth factor C useful to study and find therapy for disease associated with PDGF-C over-expression, including cardiac hypertrophy and fibrosis -
                                                                                                Sequence

       This invention describes the isolation of a novel human vascular endothelial cell growth factor E (VECF-E) polypeptide which has tranquillizer, vulnery and cardiant activity. VEGF-E can be administed therapeutically, especially by expressing encoding polynucleotides, to treat cardiovascular or endothelial disorders in mammals, especially humans. It is useful in wound repair and tissue generation and regeneration, and may especially be used to treat cardiac hypertrophy It can be combined with a carrier in pharmaceutical compositions, which is the combined with a carrier in pharmaceutical compositions, which is the combined with a carrier in pharmaceutical compositions, which is the combined with a carrier in pharmaceutical compositions.

Polynucleotides encoding VEGF-E can be used to diagnose cardiovascular and endothelial disorders in mammals, by detecting abnormally high or low VEGF-E gene expression in tissue samples. They can also be used to diagnose a disease or susceptibility to a disease related to a mutated form of VEGF-E (e.g. a cardiovascular, endothelial or angiogenic disorder such as a tumor), by detecting a mutation in the VEGF-E-encoding sequence isolated from a sample. They may also be used to produce probes useful to detect related sequences or for gene mapping. This sequence represents the human VEGF-E protein described in the mathod of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      age-related macular degeneration. It can be used to generate antibodies, useful therapeutically as antagonists, as above. The antibodies are also useful to detect VEGF-E polypeptide, especially to diagnose cardiovascular, endothelial or angiogenic disorders in mammals (e.g.

                                                                                                                                                                                                                                                                                                                                       and their polynucleotides. The nucleotide sequences are useful as sources of probes, primers, for chromosome mapping, and for generation of antisense sequences. They can also be used to create transgenic animals. The proteins can be used to treat a variety of diseases and disorders, depending on their function. Diseases that may be treated include blood coagulation disorders, cancers and cellular adhesion disorders. They may also be used to raise antibodies. AAZ33891 to AAZ34338, and AAY41685 to AAY41774 represent polynucleotide and polypeptide sequence given in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a vascular endothelial growth factor related (VEGF-R) protein. VEGF-R can be used in assays to identify compounds that bind to it or that antagonize its activity. VEGF-R antagonists (e.g. anti-VEGF-R antibodies) are useful for inhibiting tissue growth. This is useful for inhibiting tumour growth and for treating cancer. VEGF-R itself can be used to stimulate tissue growth, angiogenesis and to treat coronary artery blockage. The VEGF-R coding sequence can be used for the recombinant production of the VEGF-R protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                       The invention relates to the human growth factor homologue zvegf4 CC (AAB48653), and nucleic acids encoding it (AAC81555). Zvegf4 is a member CC of the PDGF (platelet-derived growth factor)/YEGF (vascular endothelial CC growth factor) family. Zvegf4 has a growth factor domain (AAB48654) CC (AAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like CC characterised by a PDGF cystine knot structure. Zvegf4 has PDGF-like CC (AAB48655) which has a beta barrel structure. Zvegf4 has PDGF-like CC activity, having mitogenic activity on fibroblasts, vascular smooth CC growth. The invention also relates to fusion proteins comprising human zvegf4 or fragments thereof, particularly human zvegf4/human zvegf4 or growth. The invention also relates to fusion proteins comprising human zvegf4 nucleic acids; the recombinant expression of human zvegf4/human zvegf4 or a fragment thereof; a method of activating a cell-surface PDGF receptor using a zvegf4-derived polypeptide; a cell-surface polypeptides; and a method of detecting a genetic cell-surface polypeptides; and a method of detecting a genetic cell-surface polypeptides; and a method of detecting a genetic cell-surface polypeptides; and a method of detecting a genetic cell-surface polypeptides; and a method of detecting a genetic cell-surface polypeptides; and a method of detecting a genetic cell-surface polypeptides; and a method 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  03-MAY-1999;

Also described is a method of slowing the progress of atherosclerosis or treating atherosclerosis comprising the administration of an LPB antagonist. The method is useful for enhancing tissue growth, promoting wound healing and stimulating smootl muscle growth. Antagonists of LPB are useful for treating atherosclerosis. The present sequence represents human LPB, which is

The PRO polynucleotides and polypeptides have cytostatic activity. The polynucleotides and polypeptides can be used for detecting the presence of PRO polypeptides in samples, for linking bioactive molecules to cells and for modulating biological activities of cells, using the polypeptides for specific targeting. The polypeptide targeting can be used to kill the target cells, e.g. for the treatment of cancers. The polypeptide pairs provide specific targeting of bioactive molecules to cells. AAC78600 to AAC78987 represent PCR primers and probes used in the isolation of the PRO polynucleotide sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ferrara N,

                                                                                                                                                                                                                                                                                                                                                                                                                                                   vulnerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and antidiabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the RACE generated human VEGF-X protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New vascular endothelial growth factor protein, useful for treating or preventing diseases associated with inappropriate angiogenesis activity such as cancer, rheumatoid arthritis, psoriasis and wounds -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                rheumatoid arthritis; diabetic retinopathy; blood vessel; organ repair; tissue regeneration; tissue repair; wound; dermal ulcer; pressure sore; venous sore; diabetic ulcer; burns; skin graft growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      19-JAN-2001
                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gordon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (JANC

vessels, growth and development of tissues, tissue regeneration and orgal and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGF-X protein

and organ

from clones 4 and 7 described in the method of

the

invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel vascular endothelial growth factor-X (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has vulnerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and antidiabetic activity and acts as an angiogenesis and vascularization regulator. An antisense molecule of the invention is useful for treating or preventing cancer, rheumatoid arthritis, psoriasis and diabetic retinopathy by inhibiting angiogenic activity or inappropriate vascularization including formation and proliferation of new blood vessels, growth and development of tissues, tissue regeneration and organ and tissue repair in a subject. The products of the invention are useful for preparing medicaments for treating wounds such as dermal ulcers, pressure sores, venous sores, diabetic ulcers and burns and to promote with moral treating the products of the invention are useful contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        skin graft growth, tissue repair, proliferation of new blood vessels, tissue regeneration and organ repair by promoting anglogenic activity or vascularization. This sequence represents a human VEGF-X protein described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
